Contents

1. Introduction

2. Requirements

3. Downloading & Installation

4. How to use the plugin?

1. Introduction

Mass Users Password Reset is a WordPress Plugin that lets you resets the password of all users. It can group the users according to their role and resets the password of that group. It sends a notification email to users about their new randomly generated password. The pro version comes with the multiple methods to reset the password and customized email templates with the new password information. It supports multiple languages and compatible with the WooCommerce, BuddyPress and Dokan - Multivendor Marketplace. It has the best user interface in the latest version thatsupport some advanced features like custom field filter, test mode and WP CLI support too.

Compatible with:

2. Requirements

1) WordPress 4.4 or higher.

2) If If you are using the free version of the Mass User Password Reset Plugin, the first thing you need to do is deactivate and delete it from the WordPress set up.

a) **Delete via admin panel**

Go to plugins, search for 'Mass Users Password Reset' then deactivate and delete it.

b) **Delete via FTP**

Go to wp-content/plugins directory. Search for 'Mass Users Password Reset' folder and delete it.

3. Downloading & Installation

Upload via WordPress Admin Panel

1. Log into WordPress and Plugins page

2. Select the .zip file you downloaded and click Install

3. Enter your FTP information if required and install the plugin

4. Activate the plugin

MASS USERS PASSWORD RESET PRO
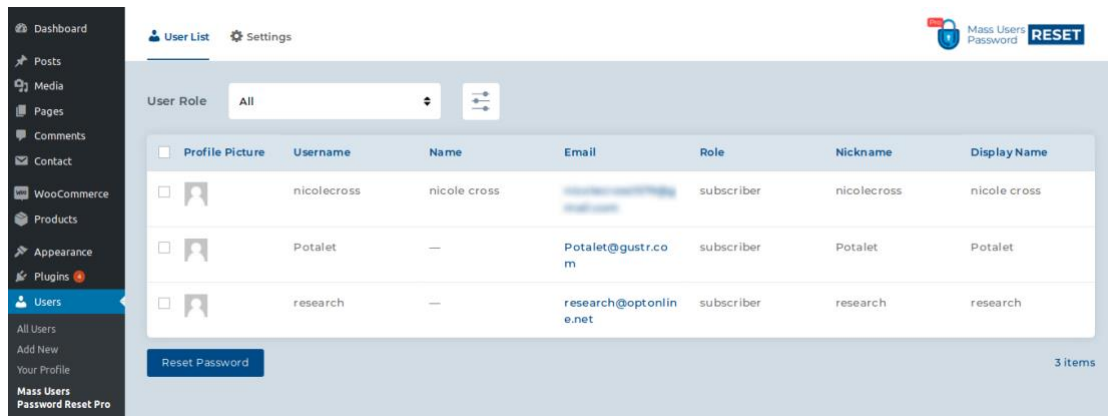

Upload via FTP

1. Unzip the .zip file you downloaded.

2. Upload the "Mass Users Password Reset Pro" plugin folder to your wp-content/plugins

directory.

3. Navigate to your Admin Panel: Plugins.

4. Under "Mass Users Password Reset Pro", click Activate.

4. How to use the plugin?

Once you have installed the plugin, you have to visit **Users >> Mass Users Password Reset**
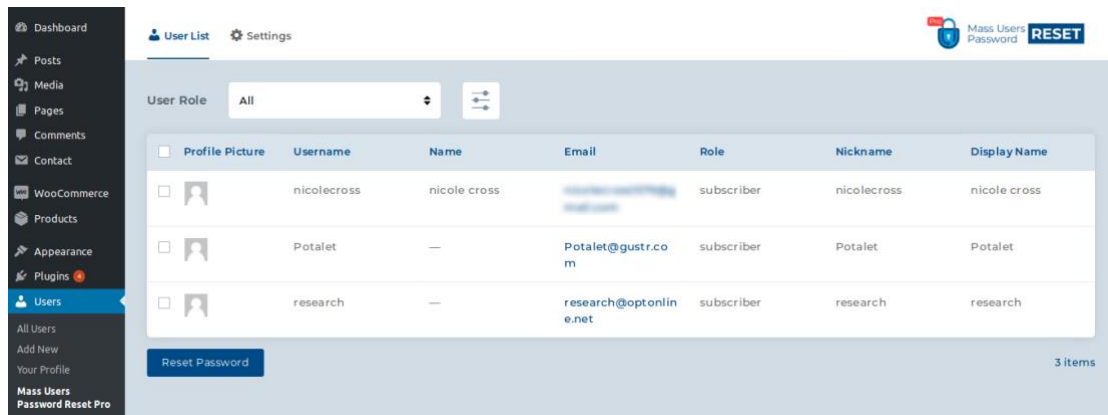

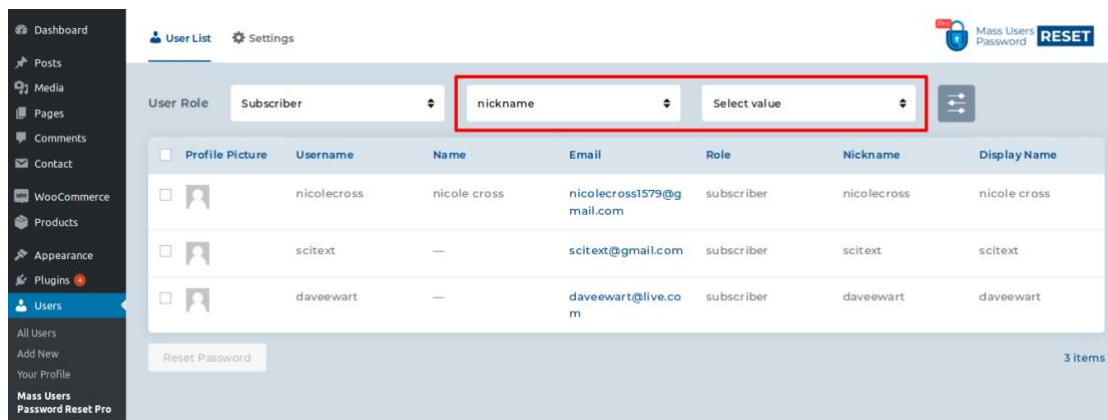

Pro to use it.

Reset password:

You can reset all users' password by selecting the 'Reset All User Password' button from
the screenshot above.

Role-based grouping:

You can select the specific roles of users from the user list and reset the password of the user of that specific group only.

Custom filters:

You can set the custom filters for user selection by clicking on the 'Filter' icon. Custom field filters will display different user meta keys. You can reset the password of a specific group of users based on selected custom field and selected value.

Note: User filtration can be done either based on roles or based on custom filters.

MASS USERS PASSWORD RESET PRO

Customized email template:

You can customize the reset password email template by inserting the user details to the email. You can do that by using the placeholders on the right side. These placeholders can be used in the message body only. There will be 2 options for resetting the password.

1. Admin will reset the password of all users and mail containing changed password will be received to them. The length of a randomly generated password is 8 characters by default. You can customize that by applying filter 'mupr_password_length'.

For Example: Write this code in function file:

```
add_filter('mupr_password_length','my_theme_function');
function my_theme_function(){
return 6;
}
```

Note: Make sure that send password reset link is disabled in email settings.

2. User can set the new password. The system will send them the reset password link and the user will be able to generate their new password following that link.

{RESET_PASSWORD_URL} link takes you to default WordPress reset password page while the link in {WOO_RESET_PASSWORD_URL} will take you to WooCommerce reset password page.

Note: Make sure that send password reset link is enabled in email setting.

Reset single user password in user page:
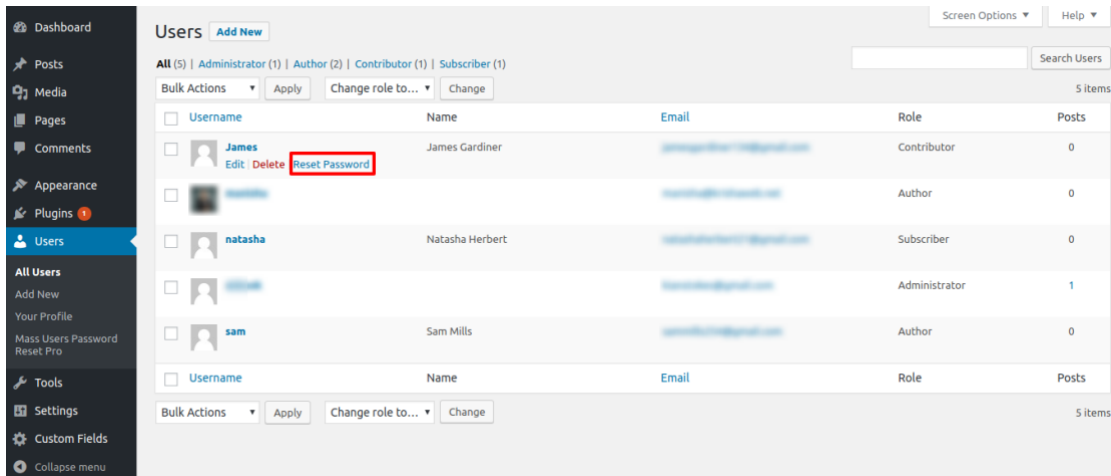

You can reset the password of a single user from users page as well. You can do that by clicking on the reset password link below the specific user name. The message containing the respective user's name will be displayed on success.
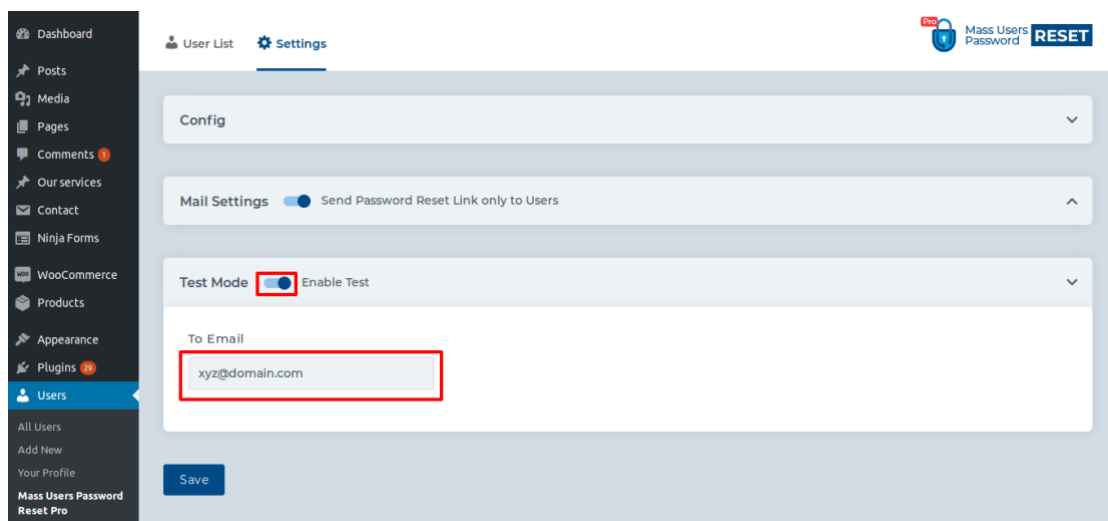

Reset password bulk action:
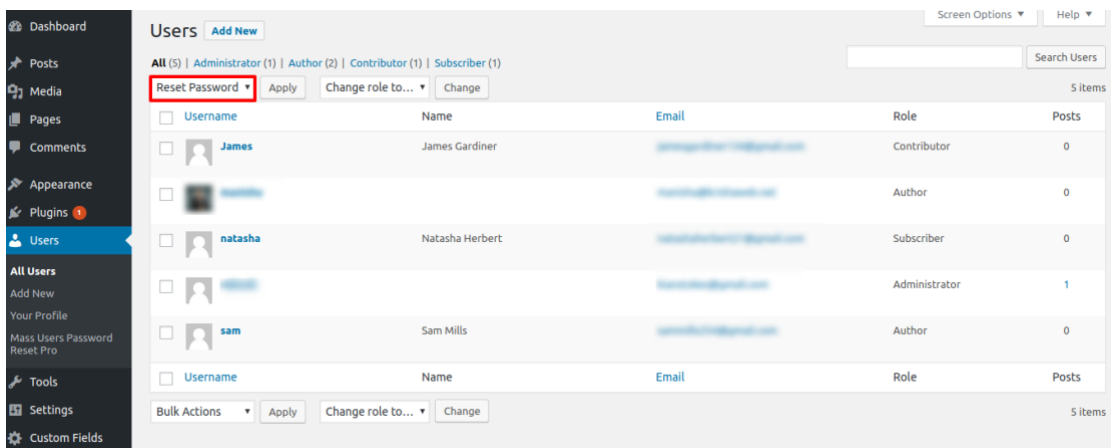

You can reset the password of multiple users without having anything common in them by just check the box of the respective user and select Bulk action 'Reset Password'.
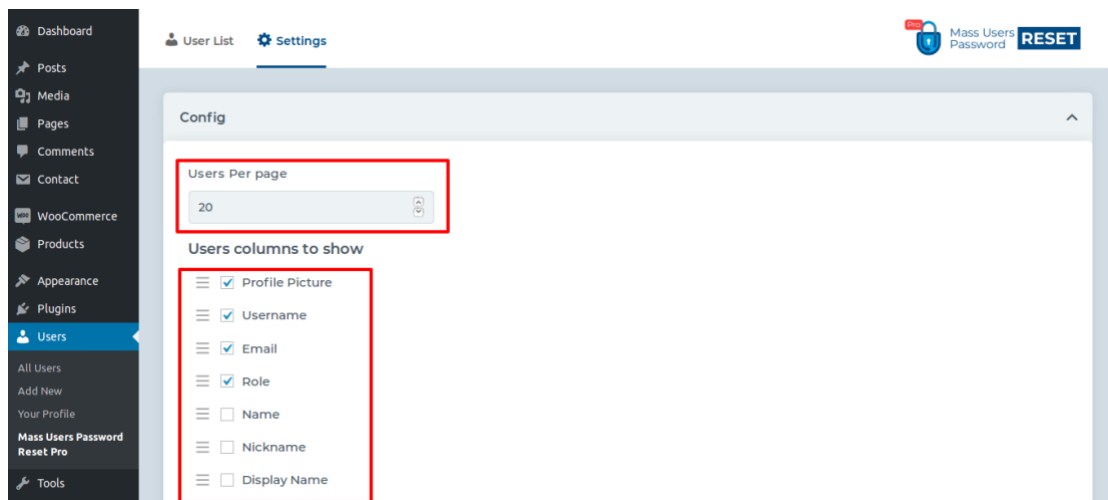

Note: Bulk action will only work in WordPress 4.7 or higher version.

Test mode:

Test mode now lets you send the password reset link to specific email id only. If you have kept the test mode enabled, it won't bother all users by sending the reset email password link and send the new password link to that email only.

User list pagination:

You can select the number of users to display per page from the config settings. You can also select what details about the users will be displayed on the user listing page.

Password reset through WP CLI:

We have added some initial WP-CLI support for resetting the user's password. You can use role, user id and custom fields also while resetting the password through command line.

Following is the list of the WP CLI commands you can use:

1) wp mupr reset --all
2) wp mupr reset --role="name"
3) wp mupr reset --user_id="1 2 3 4 5"
4) wp mupr reset --role="name" --meta_key="key" --meta_value="value" meta_compare="!= | > | >= | < | <= | LIKE | NOT LIKE | IN | NOT IN | EXISTS | NOT EXISTS"
5) wp mupr reset --meta_key="key" --meta_value="value" meta_compare="!= | > | >= | < | <= | LIKE | NOT LIKE | IN | NOT IN | EXISTS | NOT EXISTS"
6) wp mupr update option --reset_link="enabled|disable"
7) wp mupr update option --test_mode="enabled|disabled" --test_mode_email="xyz@domain.com"
